

MIMICS Web Site

Deliverable D5.1

List of Partners: Swiss Federal Institute of Tech. Zurich, CH
Hocoma AG, Volketswil, CH
University of Ljubljana, SLO
Universitat Politecnica de Catalunya, SPA
Neurological Clinic Bad Aibling, D

Document Identifier: MIMICS-D5.1-pu.pdf
Version: 1.1
Date: 2008-03-06
Organisation: ETH Zurich
Deliverable: 5.1
Milestone: -
Workpackage: 1
Task: 5.1 & 5.4
Dissemination: public
Authors: Robert Riener, Martin Simnacher, Lukas Zimmerli
Approved by: Robert Riener

Web Site

A MIMICS Web site was set up to promote and present the project and its results to the general public. It will be regularly but at most quarterly updated with results, images, videos, etc. Materials with dissemination nature can be freely accessed. Project documents, interim results and developments, measurement records and patients' data will not be accessible.

In an up date version all information available on the Web site will be classified into various security grades in order not to affect IP rules (e.g. patent applications) and the commercial interest of the Consortium and mechanisms will be implemented for granting access only the authorised users.

Location

The MIMICS web site will be hosted at the ETHZ.

MIMICS Multimodal Immersive Motion rehabilitation with Interactive Cognitive Systems

Location of Project Partners

EU Project

Research and development activities of the MIMICS project are funded through the European Union under the **7th Framework programme**.

Overview

The main hypothesis of this project is that movement training for neurorehabilitation can be substantially improved through immersive and multimodal sensory feedback. The approach is real-time acquisition of behavioural and physiological data from patients and the use of this to adaptively and dynamically change the displays of an immersive virtual reality system, with the goal of maximising patient motivation. This will result in complex systems that are natural, user-friendly and easy to use.
